

# Subject Index

## A

---

Allografts, 111  
Angiography, intracranial aneurysm outcomes, 143-148  
Anterior communicating aneurysms, 87  
Antibiotics, shunt catheters, 122-125  
Arteriovenous malformations (AVMs), 10-12  
    pediatric, gamma knife surgery, 126-132  
Autografts, 110

## B

---

Basilar tip aneurysms, 87  
Basilar trunk aneurysms, 88  
B-cell lymphoma-2, malignant progression in glioma and, 149-154  
Bone fusion, 110  
Bone morphogenetic proteins, 110-113  
Bone substitutes, for spinal fusion, 110-112

## C

---

Cavernous malformations (CM), 27-41  
Cerebrospinal fluid, 65-71  
Cerebrospinal fluid shunts, hospital costs and resource use, 122-125  
Chronic traumatic encephalopathy, 53  
Clinical documentation, neurosurgical patients, 155-163  
Complications  
    aneurysm surgery, 93-109  
    gamma knife surgery, 129  
Concussion, 51-56  
Congress of Neurological Surgeons, 1-6  
Cushing's disease, 13-26

## D

---

DNA double helix research, 73

## E

---

Embolic agents, endovascular management, 46  
Endocrine testing, Cushing's disease, 21  
Endonasal approach, tumors of pituitary fossa, 79-83  
Endoscopic monitoring, intracranial aneurysms, 84-92  
Endovascular embolization, AVM, 11, 127

## F

---

Flow diversion, endovascular management, 46

## G

---

Gamma knife surgery, pediatric AVMs, 126-132  
Genetics, cavernous malformations, 31  
Glioma tumors  
    B-cell lymphoma-2 in, 149-154  
    surgery, 7-9  
Grading system, AVM, 10

## H

---

Head injury, vitamin C and E in, 133-137  
History  
    AVM, 10, 29  
    cavernous malformations, 29  
    Cushing's disease surgery, 13  
    glioma surgery, 7-9  
    hydrocephalus, 65  
    medical practice, 57-64  
    pediatric AVMs, 126  
HMG CoA reductase and statin research, 74  
Hospital costs, antibiotic-impregnated versus standard catheters, 122-125  
Hydrocephalus, pathophysiology, 67-68  
Hydrocephalus Clinical Research Network (HCRN), 69

## I

---

Imaging, cavernous malformations, 27  
Internal carotid artery aneurysm, 85  
International Subarachnoid Aneurysm Trial, 42-43  
Intracranial aneurysms  
    coiled ruptured, outcomes, 143-148  
    complication avoidance, 93-109  
    surgery, 84-92

## M

---

Magnetic resonance imaging (MRI)  
    Cushing's disease, 15-16  
    phase-contrast, intracranial shunt tube, 138-142  
Medical practice, 57-64  
Medical records, improving documentation, 155-163  
Microscopic monitoring, intracranial aneurysms, 84-92  
Microsurgery, AVM, 11

## N

---

Neurocognitive function, pediatric gamma knife surgery and, 129  
Neuroendovascular therapy, 42-50  
Neuropsychological testing, concussion, 52  
Neurosurgical patients, medical record documentation, 155-163  
Neurosurgical pioneers, 1-6

## O

---

Omega-3 EFAs, 53-54

## P

---

Pediatric arteriovenous malformations, gamma knife surgery, 126-132  
Pituitary fossa, tumors, 79-83  
Postconcussion syndrome, 51  
    alternative treatment, 51-55  
    testing, 52

**R**

---

Research, performing quality, 72-78

**S**

---

Shunt catheters, hospital costs and resource use, 122-125

Slit ventricle syndrome (SVS), 65-66

Spinal deformity, 110-116

Spinal neoplasms, surgical resection as predictor of survival, 117-121

Sports, concussion management, 51-56

Stereotactic radiosurgery

    AVM, 11, 127

    cavernous malformations, 37

Stroke, endovascular management, 46

Subarachnoid hemorrhage, long-term outcomes, 143-148

Surgery

    aneurysm, complication avoidance and management, 93-109

    AVM, 10-12

    cavernous malformations, 32

    Cushing's disease, 13-26

    gamma knife, pediatric AVMs, 126-132

glioma tumors, 7-9

intracranial aneurysms, 84-92

neuroendovascular, 42

single brain metastases, 75

spinal deformity, 110-116

spinal neoplasms, 117-121

tumors of pituitary fossa, 79-83

**T**

---

Tumors, 79

    Cushing's disease, 14-15

    glioma, 7-9, 149-154

    pituitary fossa, 79-83

    spinal, 117-121

**V**

---

Ventriculoperitoneal shunt, malfunction, 138-142

Vertebral artery aneurysms, 88

Vitamin C, use in severe head injury, 133-137

Vitamin E, use in severe head injury, 133-137
